von Neumann, John

Mathematical foundations of quantum mechanics.
New edition of [MR0066944].
Translated from the German and with a preface by Robert T. Beyer.
Edited and with a preface by Nicholas A. Wheeler.
ISBN 978-0-691-17857-8; 978-0-691-17856-1

Publisher’s description: “Quantum mechanics was still in its infancy in 1932 when the young John von Neumann, who would go on to become one of the greatest mathematicians of the twentieth century, published Mathematical Foundations of Quantum Mechanics—a revolutionary book that for the first time provided a rigorous mathematical framework for the new science. Robert Beyer’s 1955 English translation [MR0066944], which von Neumann reviewed and approved, is cited more frequently today than ever before. But its many treasures and insights were too often obscured by the limitations of the way the text and equations were set on the page. In this new edition of this classic work, mathematical physicist Nicholas Wheeler has completely reset the book in TeX, making the text and equations far easier to read. He has also corrected a handful of typographic errors, revised some sentences for clarity and readability, provided an index for the first time, and added prefatory remarks drawn from the writings of Léon Van Hove and Freeman Dyson. The result brings new life to an essential work in theoretical physics and mathematics.”
