Neumann, János [von Neumann, John]
A kvantummechanika matematikai alapjai. (Hungarian) [[Mathematical foundations of quantum mechanics]]
With an introduction by Iván Abonyi.
Translated from the 1964 Russian edition by Ákos Sebestyén.

From the introduction to the Hungarian edition: “While the primary purpose of the present edition is to make available in the Hungarian language this living document in quantum mechanics, since even today it is still effective, it is also intended to be a modest salute to the epoch-making contributions of von Neumann to mathematics and physics.”

The original German edition [Springer, Berlin, 1932] was the only one to receive a complete review [Zbl 5, 91].

The present translation was made from the 1964 Russian edition [“Nauka”, Moscow, 1964; MR0178731].
